

RONASH SHARMA

Data Analyst | Data Science | AI/ML

CURRICULUM VITAE

sharma.ronash04@gmail.com | +977-9849556381 | Chabahil, Kathmandu, Nepal | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

CAREER OBJECTIVE

Final-semester B.Sc. CSIT student (Tribhuvan University) with hands-on, end-to-end experience across the machine learning lifecycle: data collection, exploratory analysis, model development, API deployment, and dashboard reporting built through six independently completed projects using Python, SQL, Scikit-learn, FastAPI, ChromaDB, and Tableau. Looking for a Data Analyst or Data Science internship where I can apply these skills to real business problems while continuing to grow toward a full-time Data Scientist or AI Engineer role.

EDUCATION

B.Sc. Computer Science and Information Technology (B.Sc. CSIT)

College of Applied Business & Technology | Tribhuvan University — 2022–2026 | CGPA: 3.40/4.0

Higher Secondary Education (+2 Science)

Trinity International SS & College | National Examinations Board (NEB) — 2021–2022 | GPA: 3.22/4.0

Secondary Education Examination (SEE)

Sainik Awasiya Mahavidhyalaya | National Examinations Board (NEB) — 2020 | GPA: 3.70/4.0

PROFESSIONAL TRAINING

Data Science with Python Program

Broadway Infosys (Skill Development Institute) — Duration: 3 Months | Status: Completed

- Python Programming for Data Science, Statistical Analysis & Data Mining
- Database Management with MS SQL Server
- Machine Learning (Linear Regression)
- Data Visualization with Tableau
- Interactive Web Applications with Streamlit

TECHNICAL SKILLS

Programming Languages: Python (Pandas, NumPy, Scikit-learn), SQL (Microsoft SQL Server)

Machine Learning & Statistics: Regression & Classification Models, Feature Engineering, Model Evaluation (Accuracy, Precision, Recall, F1), Statistical Analysis, Data Mining

Deployment & Backend: FastAPI, REST API Design, Streamlit, Docker (basic), Git & GitHub, GitHub Actions (basic CI)

AI & LLM Integration: Large Language Model (LLM) Application Development, Retrieval-Augmented Generation (RAG) Pipeline Design, Vector Databases (ChromaDB), Google Gemini API, Prompt Engineering

Data Visualization: Tableau (Dashboard Creation, KPI Reporting), Data Storytelling, Jupyter Notebooks

Web & Data Collection: Web Scraping (BeautifulSoup, Requests), API Integration, JSON

Tools & Platforms: VS Code, Jupyter, Git/GitHub, Microsoft SQL Server, Tableau Desktop

KEY PROJECTS

RAG Document Q&A Assistant | Python, FastAPI, ChromaDB, Google Gemini API, Streamlit

github.com/RonashSharma/RAG_Document_QA_Assistant

- Built a complete Retrieval-Augmented Generation pipeline: PDF text extraction, overlapping chunking, vector embedding, and similarity search via ChromaDB, so answers are grounded in real document content rather than the model's own memory
- Designed the prompt-augmentation layer to explicitly decline answering when retrieved context is insufficient, reducing hallucination risk
- Deployed as a FastAPI backend with a Streamlit frontend; every answer returns structured source citations (document name and page number) for verifiability

Customer Churn Prediction System | Python, Scikit-learn, Streamlit, Tableau

github.com/RonashSharma/customer-churn-prediction-system

- Built an end-to-end supervised machine learning pipeline :data cleaning, exploratory data analysis, preprocessing (ColumnTransformer, OneHotEncoder, StandardScaler), and a Random Forest classifier to predict customer churn from usage, billing, and support-interaction data
- Deployed the trained model as an interactive Streamlit web application returning real-time churn probability, risk level, and a retention recommendation for each customer profile

- Designed a Tableau business dashboard tracking churn rate, contract length, payment delay, and support-call volume to support stakeholder decision-making

Gemini LLM Application | *Python, Google Gemini API*

github.com/RonashSharma/Gemini-LLM

- Developed an interactive application integrating Google's Gemini Large Language Model for natural language querying and intelligent, context-aware response generation
- Implemented real-time request handling between the application interface and the Gemini API, gaining practical experience with LLM-powered application design

Automated Web Data Extraction System | *Python, BeautifulSoup, Requests, JSON*

github.com/RonashSharma/book-price-web-scraper

- Designed a paginated web scraping pipeline extracting structured book title, price, and currency data across multiple pages of an online bookstore
- Applied data cleaning and validation before exporting the collected dataset to structured JSON for downstream use

Logistic Regression API | *Python, Scikit-learn, REST API*

[github.com/RonashSharma/Logistic Regression API](https://github.com/RonashSharma/Logistic-Regression-API)

- Trained a logistic regression classification model and deployed it as a REST API, enabling real-time predictions via HTTP requests rather than a notebook-only workflow
- Structured the project with clear request/response handling, demonstrating the transition from experimental model to a consumable backend service

Salary Prediction Model | *Python, Scikit-learn*

github.com/RonashSharma/Salary-Prediction

- Built a regression-based model to predict salary from experience and role-related features, covering data preprocessing, model training, and evaluation

CORE COMPETENCIES

Technical: Database Design & Management, Statistical Modeling, Data Visualization, ML Implementation, API Development

Professional: Analytical Problem-Solving, Critical Thinking, Attention to Detail, Self-Directed Learning, Communication, Team Collaboration, Project Management

DECLARATION

I hereby declare that the information provided above is true and correct to the best of my knowledge and belief.
