

RONASH SHARMA

Data Analyst | Data Science | AI/ML

sharma.ronash04@gmail.com | +977-9849556381 | Chabahil, Kathmandu, Nepal | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Final-semester B.Sc. CSIT student (Tribhuvan University) specializing in Data Science, Analytics, and AI/ML. Experienced across the complete machine learning lifecycle: data collection, exploratory analysis, model development, API deployment, and dashboard reporting: using Python, SQL, Scikit-learn, FastAPI, and Tableau. Seeking a Data Analyst or Data Science internship/entry-level role to apply analytical thinking and engineering skills to real business problems.

EDUCATION

B.Sc. Computer Science and Information Technology (B.Sc. CSIT)

College of Applied Business & Technology | Tribhuvan University — 2022–2026 | CGPA: 3.57/4.0

Higher Secondary Education (+2 Science)

Trinity International SS & College | National Examinations Board (NEB) — 2021–2022 | GPA: 3.22/4.0

Secondary Education Examination (SEE)

Sainik Awasiya Mahavidhyalaya | National Examinations Board (NEB) — 2020 | GPA: 3.70/4.0

PROFESSIONAL TRAINING

Data Science with Python

Broadway Infosys (Skill Development Institute) | 3 months | Completed

Python for Data Science, Statistical Analysis & Data Mining, MS SQL Server, Machine Learning (Linear Regression), Tableau, Streamlit

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, Scikit-learn), SQL (MS SQL Server)

ML & Statistics: Regression & Classification, Feature Engineering, Model Evaluation (Accuracy, Precision, Recall, F1), Statistical Analysis

Deployment & Backend: FastAPI, REST API Design, Streamlit, Docker (basic), Git/GitHub, GitHub Actions (CI)

AI & LLM: LLM Application Development, RAG Pipeline Development, Vector Databases (ChromaDB), Google Gemini API, Prompt Engineering

Data Visualization: Tableau (Dashboards, KPI Reporting), Data Storytelling, Jupyter

Data Collection: Web Scraping (BeautifulSoup, Requests), API Integration

KEY PORTFOLIO PROJECTS

RAG Document Q&A Assistant | Python, FastAPI, ChromaDB, Gemini API, Streamlit

github.com/RonashSharma/RAG_Document_QA_Assistant

- Built a full Retrieval-Augmented Generation pipeline: PDF extraction, chunking, vector embeddings, and similarity search via ChromaDB, grounding LLM answers in real document content instead of model memory
- Deployed as a FastAPI backend with a Streamlit frontend, returning answers with source document and page-level citations for verifiability

Customer Churn Prediction System | Python, Scikit-learn, Streamlit, Tableau

github.com/RonashSharma/customer-churn-prediction-system

- Built an end-to-end supervised ML pipeline: cleaning, EDA, preprocessing (ColumnTransformer, OneHotEncoder, StandardScaler) and trained a Random Forest classifier to predict churn from usage, billing, and support data
- Deployed the model as an interactive Streamlit app returning real-time churn probability, risk level, and retention recommendation
- Designed a Tableau dashboard tracking churn rate, contract length, payment delay, and support-call volume for stakeholder decisions

Gemini LLM Application | Python, Google Gemini API

github.com/RonashSharma/Gemini-LLM

- Developed an interactive application integrating Google's Gemini LLM for natural-language querying and context-aware response generation
- Implemented real-time request handling between the app interface and the Gemini API, gaining hands-on experience in LLM-powered application design

Automated Web Data Extraction System | Python, BeautifulSoup, Requests, JSON

github.com/RonashSharma/book-price-web-scraper

- Designed a paginated web scraping pipeline extracting structured title, price, and currency data across multiple pages of an online bookstore
- Applied data cleaning and validation before exporting the collected dataset to structured JSON for downstream analysis

Logistic Regression API | Python, Scikit-learn, REST API

github.com/RonashSharma/Logistic_Regression_API

- Trained a logistic regression classifier and deployed it as a REST API, enabling real-time predictions via HTTP requests instead of a notebook-only workflow
- Structured clear request/response handling, demonstrating the transition from an experimental model to a consumable backend service

CORE STRENGTHS

Technical: Database Design & Management, Statistical Modeling, Data Visualization, ML Implementation, API Development

Professional: Analytical Problem-Solving, Critical Thinking, Attention to Detail, Self-Directed Learning, Team Collaboration
